Presented by 

ANOTHER DARK SIDE OF AI TECHNOLOGY ENABLED EMISSIONS

A story of broken promises and tough trade-offs at the intersection of AI, climate, and ethics. Will and Holly will reveal what it takes to confront corporate hypocrisy, challenge the high-carbon status quo, and align technology with climate science.

Holly is a recognized sustainability leader with a decade of experience at Microsoft, where she founded and led both the company's global Community Environmental Sustainability program as well as the Employee Engagement program, supporting 10,000 employees across 36 global chapters. Holly is on the Board of Directors for American Forests and Zero Waste Washington and is an active plant-based mountain athlete.

Will is an AI product management leader working at the intersection of technology, policy, and climate. At Microsoft, he led the development of Responsible AI platform features, co-founded Green Software Engineering initiatives like the open-source Carbon Aware SDK, and co-authored Microsoft's Accelerating Sustainability with AI playbook. Outside of work, he finds inspiration in nature, exploring the rugged landscapes of the Pacific Northwest.

THE ARTS CAMPUS AT WILLITS (TACAW)
WEDNESDAY, APRIL 2 AT 7PM
(DOORS OPEN AT 6PM)

Aspen University (Aspen U) is Aspen Skiing Company's free program for employees and the community, combining education with beer and conversations facilitated by leaders on climate and justice.

RSVP!
